

Case Study: Sarah Payne

- 1) Read the case study prior to Wednesday's class. The case study can be found at <http://www.forensic.gov.uk/html/media/case-studies/f-24.html>.
- 2) As you are reading the case study, please consider the following:
 - a) What evidence was analyzed?
 - b) How many items were analyzed?
 - c) How many tests were run?
 - d) What was the success rate?
 - e) What was the cost of the analysis?
- 3) In groups please discuss and record responses (one for the entire group) for the following:
 - a) How did the defense try to discredit the evidence?
 - b) What is the importance of a control?
 - c) What have we used (or what will we use) for controls in lab?
