CH 11	4 OSP Evidence Manual, Section 20.0 Arson Evidence: due
1)	What type of container is used for suspected arson evidence? Briefly explain why this type of packaging is required.
2)	Should arson evidence, like blood and DNA evidence, be dried? YES or NO?
3)	What observations at the scene may indicate arson? List them all. Is one more likely to indicate arson than any others? If so, which one?
4)	What types of evidence should be collected? Which type of evidence is most likely to indicate arson?

5)	What is a comparison sample? What is a control sample?
	In addition to your answer for question #1, what other types of materials may be used to collect evidence?
	What materials used to collect suspected arson evidence should not be submitted to the lab?
